SENIOR SOFTWARE ENGINEER

SAEED ROSTAMI

Email : Privatemx.2010@Gmail.com

SUMMARY

Senior Software Engineer with 10+ years of experience building scalable, cloud-native systems and high-performance backend architectures. Specialized in real-time communication, distributed systems, and microservices on AWS and GCP. Proven track record of improving system performance, reducing costs, and delivering measurable business impact in production environments.

- API Design & Development
- Real-time Communication (WebRTC, WebSocket)
- Database Optimization & Management
- Cloud-based Systems
- Agile/Scrum Methodology
- Microservices Architecture

PROFESSIONAL EXPERIENCE

VIRAFARIN CO.
SENIOR SOFTWARE ENGINEER **2026–PRESENT**

- Contributing to the development and evolution of a large-scale CRM platform for employee and organizational management
- Working on a distributed microservices architecture, designing and improving reliable communication between business services
- Designed and implemented company-scoped role and permission management, enabling flexible access control across organizations
- Improved authentication and authorization workflows with a focus on security, tenant isolation, and maintainability
- Collaborating with engineering teams to analyze existing systems, refactor legacy components, and deliver production-ready features
- Contributing to API design and backend architecture for complex business workflows across multiple services

CLEXI CO.
SENIOR SOFTWARE ENGINEER **2023-2026**

- Led full-stack development of a secure SSD management platform hosted on GCP with real-time device control
- Re-architected legacy backend systems, reducing execution time by 50% and significantly improving stability
- Designed and implemented REST APIs integrated with Firebase real-time sync for remote encrypted device control
- Built an admin dashboard managing 125+ devices, delivering 20+ production features
- Reduced API latency and database load by 40% through caching strategies and rate-limiting
- Optimized cloud infrastructure and CI/CD pipelines, reducing operational costs by 25%

VOLVERO CO.
SENIOR SOFTWARE ENGINEER **2022-2023**

- Designed and implemented a cloud-native car rental platform on AWS, handling secure bookings, user verification (KYC), and fleet management
- Architected a microservices-based backend using REST APIs, improving system modularity and deployment flexibility
- Reduced booking response time by 40%, leading to improved user experience and higher conversion rates
- Decreased booking failure rate by 25% by identifying bottlenecks and optimizing service communication
- Implemented secure payment and identity verification flows, reducing fraudulent bookings by 15%
- Built and deployed monitoring pipelines using CloudWatch for real-time system observability

PEJVAK CO.
SENIOR FULL-STACK DEVELOPER **2019-2022**

- Led backend and real-time architecture for a ride-hailing platform with live driver-passenger communication and geo-tracking
- Designed and implemented WebRTC-based communication system supporting 1,000+ concurrent users
- Architected and maintained scalable microservices, improving development velocity by 25%
- Collaborated with cross-functional teams to integrate data-driven features and personalization systems
- Mentored junior engineers and introduced test-driven development practices to improve code quality

NOVIN PARDAZESH CO.
FULL-STACK DEVELOPER **2017-2019**

- Designed and developed scalable RESTful APIs using Node.js, TypeScript, and Express
- Improved system performance by 20% through query optimization and efficient API design
- Contributed to fault-tolerant system design and ensured consistent on-time sprint delivery

FREELANCER.
BACK-END DEVELOPER **2011-2017**

- Delivered 50+ backend systems for startups and SMEs across multiple domains
- Designed scalable architectures with a focus on performance, security, and reliability
- Implemented real-time features and messaging systems using event-driven architectures

KEY PROJECTS

LOVE STORY (Dating Platform)

- Built a scalable backend system for a matchmaking platform focused on long-term connections
- Designed APIs and matching logic to support user engagement and personalization

Pikaap (Real-time Transport System)

- Developed WebSocket-based real-time APIs for fleet tracking and ride dispatch
- Ensured low-latency communication between drivers and passengers

User Management System

- Designed secure access-control APIs for managing sensitive organizational data
- Implemented role-based authorization and data isolation mechanisms

EDUCATION

JABIR IBN HAYYAN
Bachelor of Software Engineering. **2012-2014**

MOLLASADRA TECHNICAL UNIVERSITY
Associate of Software Engineering. **2010-2012**

ADDITIONAL INFORMATION

- Skills: Express.js , Nest.Js , Next.js , Gin
- Databases: PostgreSQL, MongoDB, Redis
- Messaging: RabbitMQ, Kafka
- Cloud & DevOps: AWS, GCP, Docker, Kubernetes
- Real-time: WebSocket, WebRTC, Socket.IO
- Availability: Immediate
